Differential Equations. A Differential Equation is a n equation with a function and one or more of its derivatives. Example: an equation with the function y and its derivative dy dx . Solving. We solve it when we discover the function y (or set of functions y).. There are many "tricks" to solving Differential Equations (if they can be solved!).But first: why?

Differential Equations—Introduction

Elementary Differential Equations with Boundary Value Problems is written for students in science, en-gineering,and mathematics whohave completed calculus throughpartialdifferentiation. Ifyoursyllabus includes Chapter 10 (Linear Systems of Differential Equations), your students should have some prepara-tion inlinear algebra.
