How Cheetah Got His Tears eBook by Avril van der Merwe ...

How the Cheetah Got His Speed (A Bushman story) Once upon a time the Creator decided to find out which of His animals could run the fastest and so He entered the cheetah in a race with the tsessebe, which is one of the swiftest of all the antelopes. The cheetah had soft paws then, and he realized that they were not suited for real speed.

Cheetah boasts that, because he can run faster than any other animal, he is the real king of the beasts. Winning a race against the other animals only reinforces his posturing and he boasts that he can run even faster than the wind. The wind takes up the challenge, leading to an outcome that keeps cheetah's tears running down his cheeks as a permanent reminder of his place in the natural world. How Cheetah Got His Tears, an original story with the feel of African folklore, warns of the perils of boasting, yet shows that the capacity to accept defeat with grace and humility can lead to reconciliation and acceptance.

The history of life on Earth is dominated by extinction events so numerous that over 99.9% of the species ever to have existed are gone forever. If animals could talk, we would ask them to recall their own ancestries, in particular the secrets as to how they avoided almost inevitable annihilation in the face of daily assaults by predators, climactic cataclysms, deadly infections and innate diseases. In Tears of the Cheetah, medical geneticist and conservationist Stephen J. O'Brien narrates fast-moving science adventure stories that explore the mysteries of survival among the earth's most endangered and beloved wildlife. Here we uncover the secret histories of exotic species such as Indonesian orangutans, humpback whales, and the imperiled cheetah-the world's fastest animal which nonetheless cannot escape its own genetic weaknesses. Among these genetic detective stories we also discover how the Serengeti lions have lived with FIV (the feline version of HIV), where giant pandas really come from, how bold genetic action pulled the Florida panther from the edge of extinction, how the survivors of the medieval Black Death passed on a genetic gift to their descendents, and how mapping the genome of the domestic cat solved a murder case in Canada. With each riveting account of animal resilience and adaptation, a remarkable parallel in human medicine is drawn, adding yet another rationale for species conservation-mining their genomes for cures to our own fatal diseases. Tears of the Cheetah offers a fascinating glimpse of the insight gained when geneticists venture into the wild.

The fight to save the cheetahs is a race against time... Mackenzie came to South Africa to escape the trauma of her past and build herself a bright new future: love is the last thing on her mind. But she's finding it increasingly hard to ignore her feelings for the strong-minded Cole, who runs the game reserve for cheetahs just outside her town. Cole has made no secret of his feelings for her, but he realises that Mackenzie cannot be rushed so he is prepared to wait. Neither could have predicted the terrifying events that are about to overtake them. When Cole saves Mackenzie from a vicious attack, it is only the beginning of an ever-spiralling maelstrom of violence. Africa's cheetah population is being decimated, and when the poaching threat comes to their door, Mackenzie and Cole have only one option: they must fight to save the animals and life they love.

Hyena believes that none of the animals like her. She thinks that if she changes her identity she will be accepted and liked. But Hyena doesn't realise that each animal has a unique set of skills and, no matter how hard she tries, a hyena can't become an elephant, or a lion, or a leopard. When she becomes despondent, the other animals, including her own hyena clan, rally around to point out the good things about being a hyena. Finally, hyena recognises that she doesn't need to become another creature in order to be accepted. All she has to do is be the best hyena she can be.

Rhinoceros has a magnificent horn, which all the animals admire. All, that is, except Hippo, who is jealous of Rhino's horn, and wants one of her own. While Rhino is asleep, Hippo steals her horn and, after some mishaps, sets it on her snout. But Hippo quickly discovers that wearing a large and heavy horn brings more problems than rewards. Soon all the animals are telling her that a rhino horn belongs on a rhinoceros. Hippo starts to doubt her decision, and when she comes face to face with the compassionate Rhino, Hippo understands that there is no room in the world for jealousy. Hippo returns the horn to its rightful owner and slips quietly into the deep water as Rhino and the rest of the animals gather at the river's edge for their evening drink.

This story acknowledges the negative perceptions about hyenas but employs action and humour to present hyena's exceptional characteristics

The animals don't understand why they never see Bushbaby, so they assume he is shy. One by one, they try to coax him out of his hole in the tree, but Bushbaby never appears. As night falls, the animals head off to sleep. All, that is, except Owl, who has been silently observing the day's events. As Owl prepares for the night, he calls to Bushbaby, who bounds out of his hole, awake and alert. Throughout the hours of darkness, Owl, Bushbaby and the other nocturnal animals go about their everyday activities before returning to their beds as daybreak dawns.

After a night of feasting on termites and ants, Pangolin bumps into Lion as she is returning to her burrow to sleep. Since she is not a fast runner, she has to think quickly to avoid being eaten. Being polite and gentle, she doesn't want to harm Lion, so she decides to trick him instead. Aided unexpectedly by Dung Beetle, her deception proves successful and Lion soon rushes off to find Pangolin, who has been right under his nose all along. Once he is gone, the other animals come out of hiding and Pangolin learns that, despite being shy and solitary, she has more friends than she ever realised.
